

Introducing  
**The Cargo Tube**  
by Kent Did It

The Cargo Tube is ideal for your chopper, bobber or cruiser bike. It keeps your tool kit, spare bulbs and fuses, important papers or whatever clean and dry. Mount it on your front down tubes, below your headlight, under the seat or wherever. (That's the kickstand you see below it).

Made to resemble an oil tank it is constructed of rugged 3" PVC, permanently sealed on one end (with eight brass and steel 'rivets') and fully rubberized inside and out. The open end is sealed with a thermos bottle style expanding rubber cap and wing nut to keep water and dust out. This unit is 9" long although variations are available.

Use your imagination to mount the tube wherever it looks right. In these pics I added two stainless steel zip ties for looks but it also looks good as a plain 'tank'. I used two carriage bolts to attach it to the engine mount on this XS650.

The rubber skin protects against stone chips and is easily touched up if you damage it. The Cargo Tube is available in black, red or white rubberized finish!

Be the first kid on your block to own one! Just \$75 plus \$10 shipping (US) from [www.KentDidIt.com](http://www.KentDidIt.com) or email [Kent@KentDidIt.com](mailto:Kent@KentDidIt.com) if you have questions or want to know about a custom Cargo Tube.
