

COMPUTER INSTALLATION TIPS

COMPUTER MOUNTING OPTIONS:

Handlebar Mounting:

Using the included black plastic C-clamps and hardware, mount the computer to the bars. Use the line-art pictures below for reference. Do not forget to use the nuts.

Billet Aluminum Protector Mounting:

Trail Tech offers metal protectors to safeguard the computer. The protectors may fit onto the stock odometer plate, surface mount, or attach to bar clamp. Please visit Trail Tech online or call for more information.

Flat Surface Mounting:

Endurance custom installations may be performed by installing the computer onto any flat surface (a plastic body panel). Use the included screws and attach to back of computer or docking station. Depending on the thickness of material, the included screws may not be long enough for a secure attachment.

SPEED SENSOR TEST:

It is best to test sensor/magnet placement is correct before permanently mounting.

1. Set the vehicle on a stand so that the front (left) wheel spins easily.
2. Plug the speed sensor cable into the computer.
3. Install the magnetic bolt.
4. Hold the sensor in place on the caliper mount by hand. While someone watches the computer, roll the wheel. If the computer does not register, move the magnet or sensor and try again.

Do not mount so that the magnet passes the middle section of the sensor. Either the sensor will not register at all; or the sensor will register twice, causing a "double trigger" effect (computer displays twice the true speed.) If a double-trigger is unavoidable, multiply the wheel size setting in the computer by 2 to correct the problem.
